

Exploratory Data Analysis (EDA)

DecodeLabs Internship Project 2

Ahmed Shaban Ahmed

Project Objective

Analyze the dataset to discover:

- Patterns
- Trends
- Outliers
- Business Insights

Dataset Information

Rows: 1200

Columns: 16

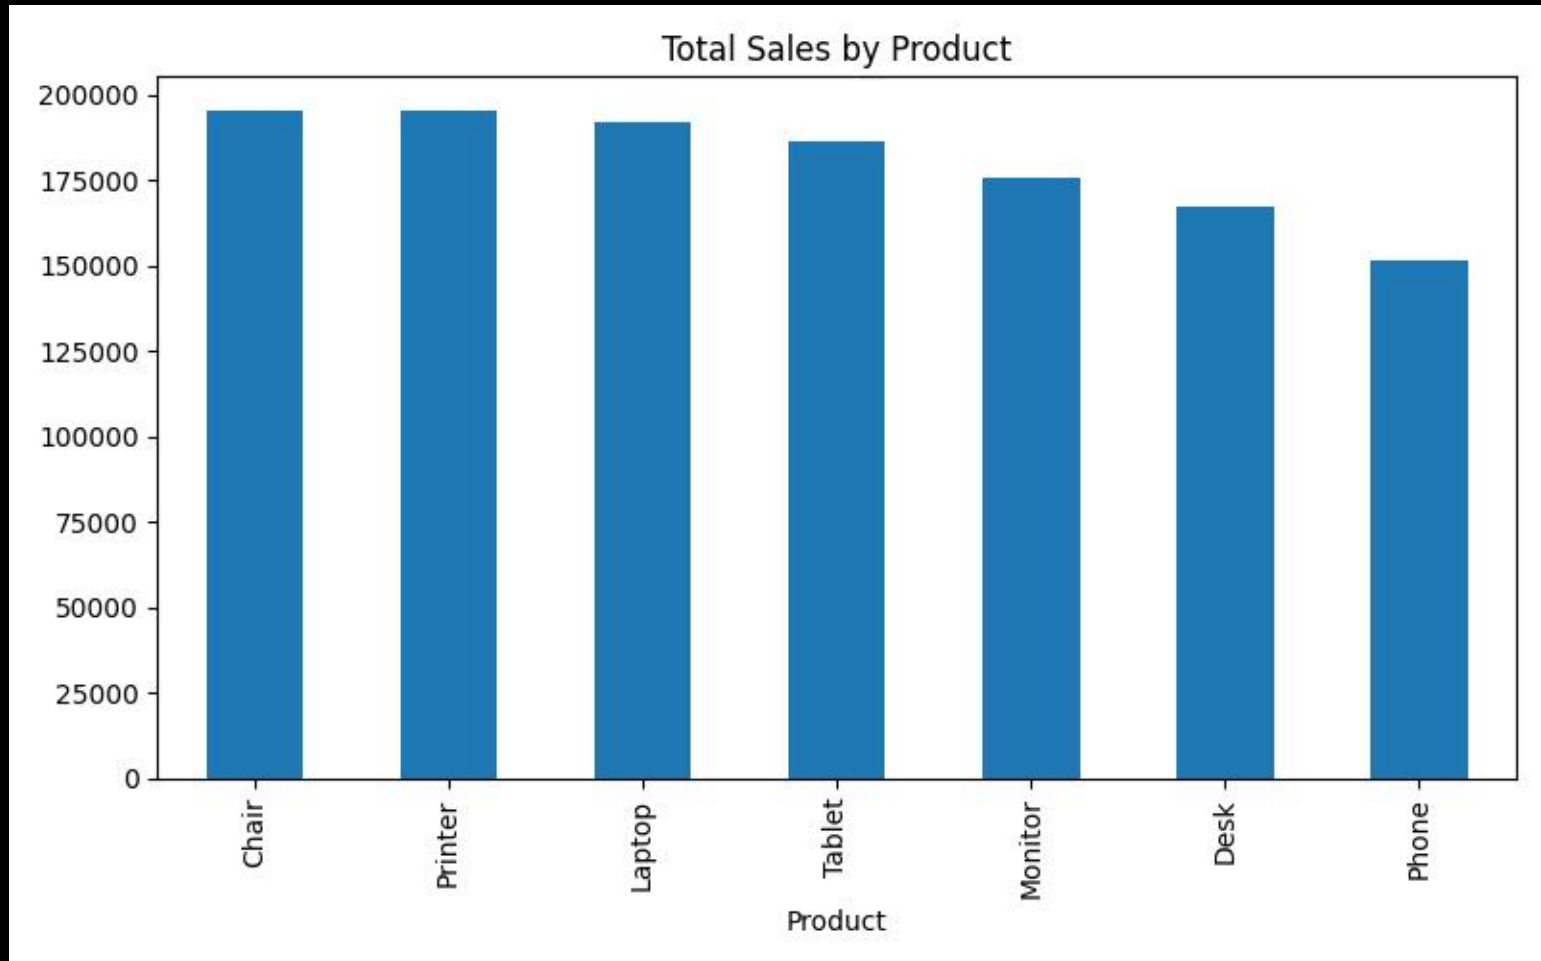

Columns Names:

OrderID, Date, CustomerID, Product, Quantity,
UnitPrice, ShippingAddress, PaymentMethod,
OrderStatus, TrackingNumber

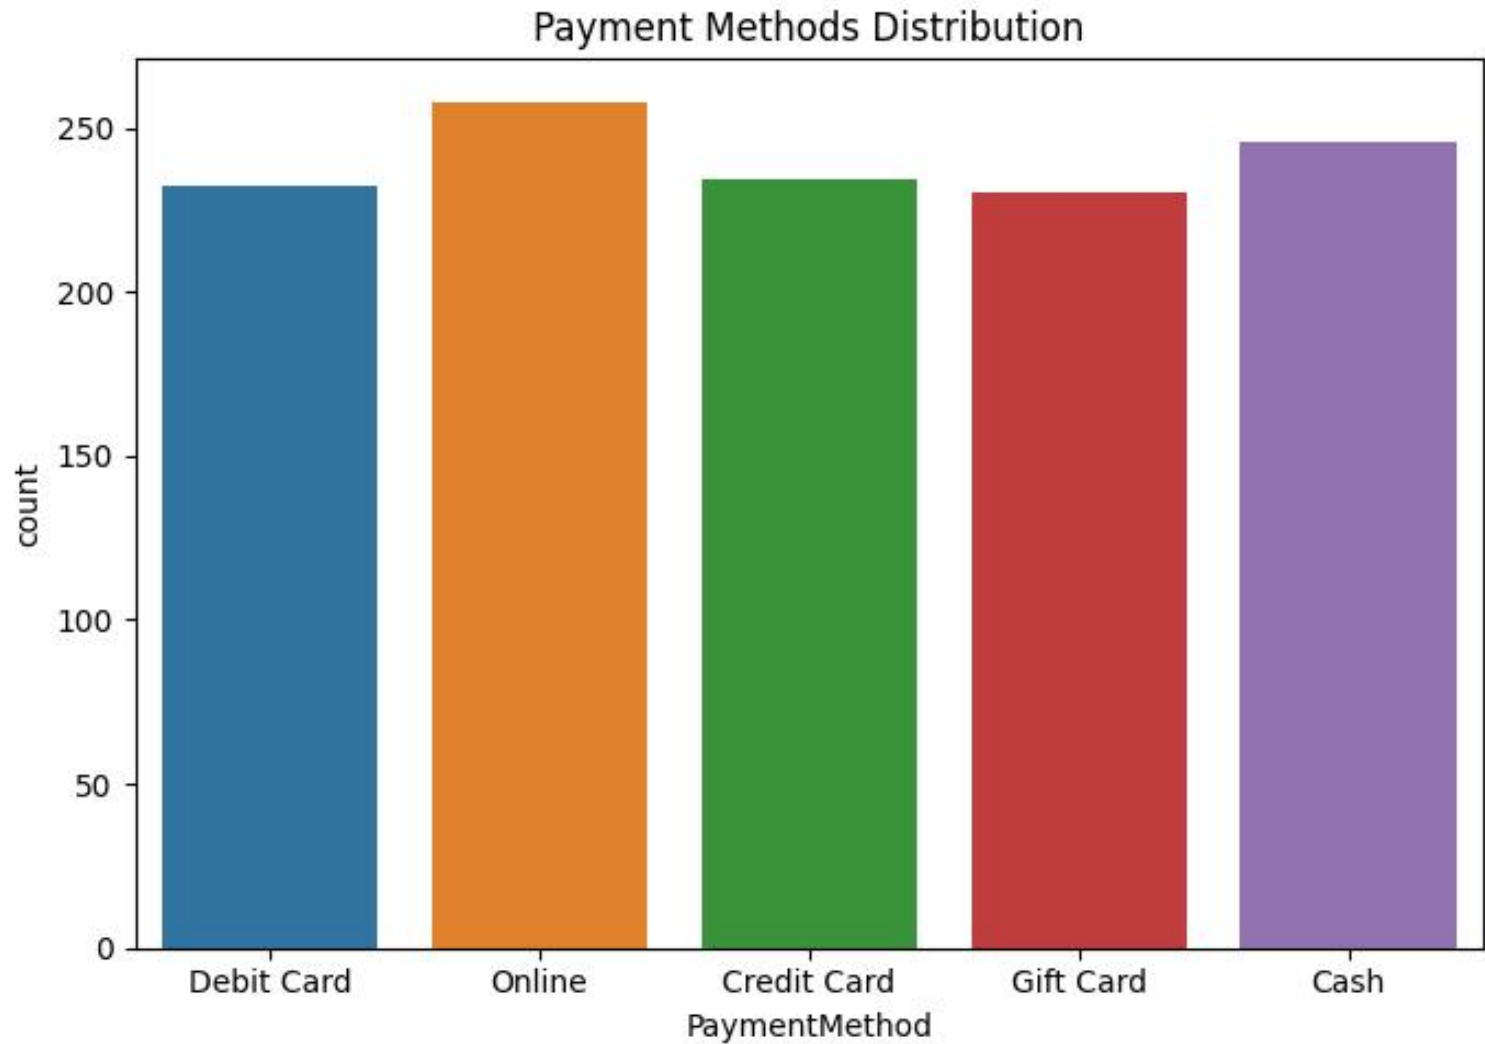

Statistical Analysis

- Mean Quantity: 2.95
- Mean Unit Price: 356.41
- Total Revenue: 1,264,761.96

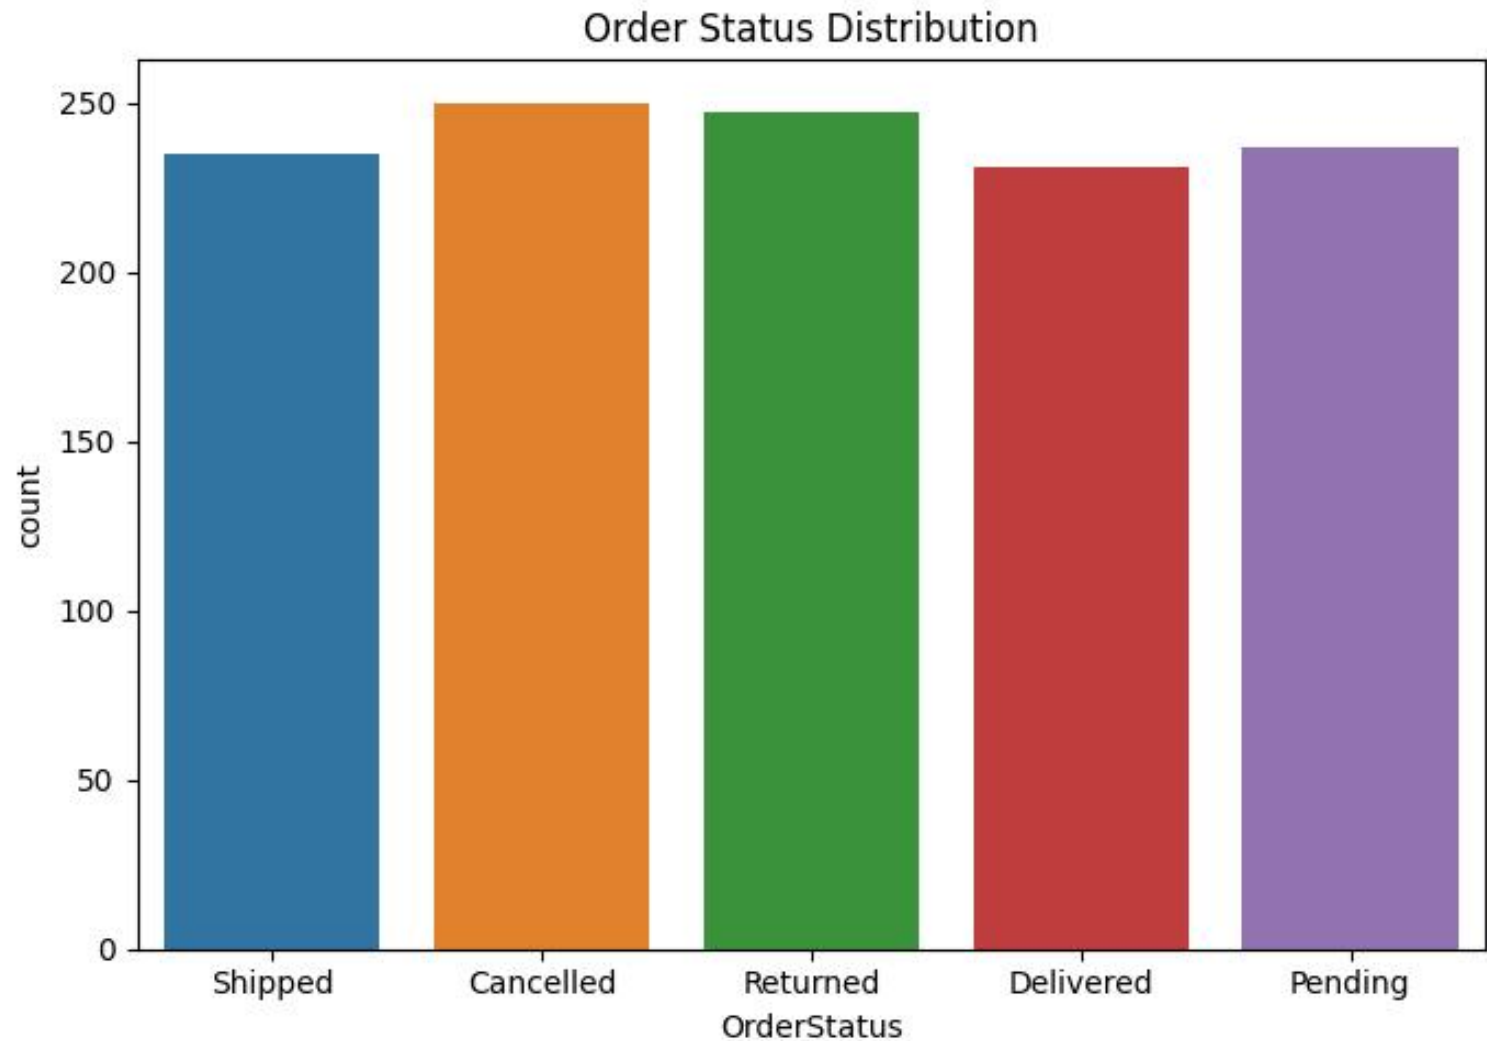

Product Sales Analysis

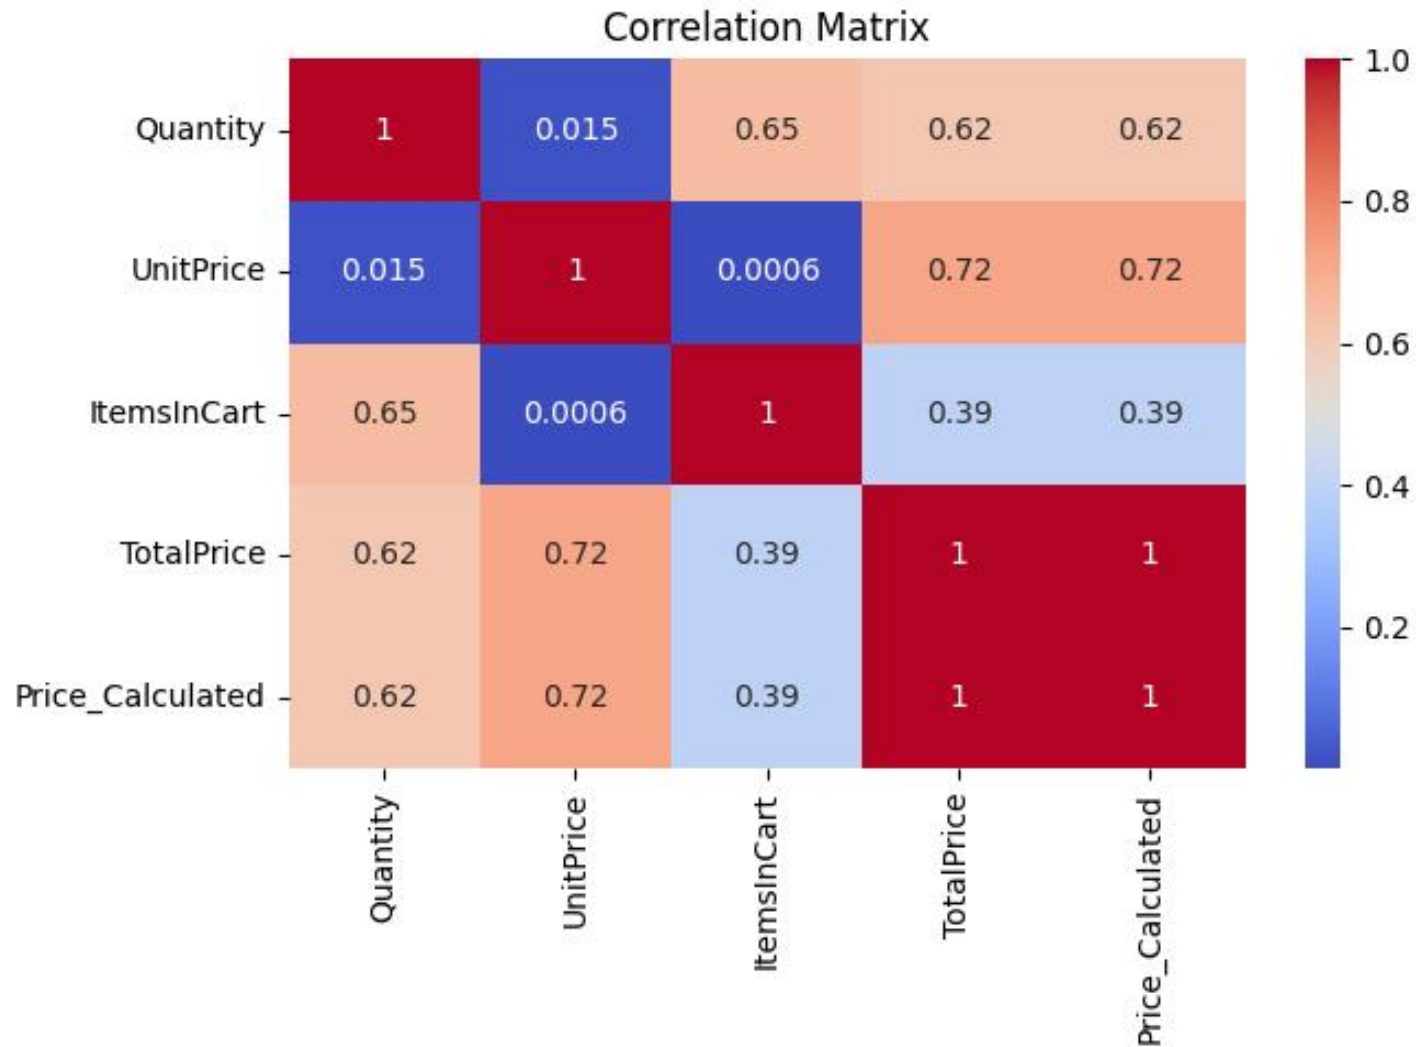

Payment Method Analysis

Order Status Analysis

Correlation Analysis

Final Insights

- Dataset is clean and organized
- Some products generate higher revenue
- Payment methods affect customer behavior
- Most orders are delivered successfully
- Correlation exists between sales variables
- Outliers represent high-value transactions

Conclusion

EDA helps transform raw data into actionable business insights.

The project improved skills in:

- Data Analysis
- Visualization
- Statistical Thinking
- Business Understanding
